We provide solutions

Just Beautiful

That's sure to be the sentiment of both neighbours and potential buyers who view a new **PC Walls** noise wall on your development. But the thing that is really beautiful is what you know about the wall's ultimate value and quality. Only a wall by **PC Walls** gives the unique look at an affordable price and with an amazingly quick installation.

Different patterns from either our Verti-crete range or a client bespoke pattern can be used on either side of the wall. Our proprietary method of vertically casting the wall panels and piers allows for endless combination of patterns at a cost competitive price.

To achieve the final effect for the wall we paint using a high quality exterior product designed for Australian conditions. After the wall installation is complete a base colour is applied to all the finished surface. Feature colours are then applied to achieve the required finished look that will complement the theme of any project. Advice on colour choice can be provided by us based on our previous experience and the client's wishes. If required we can prepare a sample panel for viewing prior to making a final decision.

The completed wall surface of a Verti-crete pattern is less likely to suffer graffiti attack due to its rough surface.

Beauty in the Look, Price and Delivery

The Value of a Precast Patterned Concrete Wall

Walls by **PCWalls** are constructed of precast concrete for unmatched durability and consistent quality. Our proprietary vertical system design outperforms traditional cast methods by dramatically improving product quality and functionality while actually reducing production and installation costs. You'll receive a moulded pattern on both sides of the wall with the look and feel of real masonry.

Beauty aside, walls by **PCWalls** products are also more durable than metal, wood or even brick or block walls. Our seamless solid-panel design provides structural strength and security that will last for decades. Moreover, walls by **PCWalls** can be engineered to meet the building code requirements of any area. Our walls are designed to endure the harshest conditions and broadest range of climates.

The Ease of Installation

PC Walls aim to provide a solutions based approach to delivering a wall project from budget pricing to design to final wall installation. Our project team will work closely with the client's team to ensure the wall installation is completed safely and on time. As much of the casting work as possible is completed off-site, this ensures a much quicker construction time on site.

The work is managed by an experienced project team, we utilise a project management plan to ensure all activities are managed correctly. If required we can work under the client's project plan to ensure there are no discrepancies with other contractors on site.

Our Culture

We are passionate about providing a solutions based approach to the construction of noise walls and other forms of concrete construction.

PC Walls are specialist providers of design, supply and construction to meet the needs of each individual client.

We utilise a dedicated self-performing crew to cast, install and complete the project. Our structural design is carried out by DWA and Associates, an experienced design engineering group. Ongoing improvements to our designs and construction techniques mean that cost savings will be passed onto future project owners.

We believe in building long term relationships with all our existing and prospective clients. We aim to review all designs to ensure the client is getting the most cost effective solution to their wall needs. Any potential cost savings are discussed with the client and passed on if implemented.

Call us today for a quote or to learn more about how our products can enhance the security and aesthetics of your project.
